ULTRATHIN CHESTRIG

APPLICATION

For carrying magazines for intermediate cartridge and equipment.

PROPERTIES

The construction is based on a flexible front wall. Thanks to this construction, the filled chambers are as small as possible, which facilitates the covert carrying. Empty chestrig is flat and smooth in the front, which significantly reduces the chance of hindrance, does not block the view nor interfere with access to the space under the pockets. Magazines are held firmly and safely, yet not hinder the drawing. The difference in retention between specific systems is minimal and depends more on the texture and shape than the size of the magazine.

Between the layers of material is a flat pocket closed with Velcro. Its interior is covered with rape-like material, which facilitates the organization of content and attachment of accessories.

The cross-strap suspenders allow for better distribution of the weight of the equipment and, while moving, the edges do not rub the wearer's neck even under heavy loads. Suspenders on the inside are lined with a soft mesh, which significantly enhances comfort and their flat profile allows for comfortable use with the backpack. Additional stabilization is provided by a transverse belt on the back.

Elastic webbing for tactical applications ensures product's durability. Webbing has a thickness of 1.2 mm and is tensile. However, we do not recommend storing cartridges in the pockets when not in use.

MATERIALS

Fabrics:	Cordura, spacing mesh, velcro-like
Webbing:	Polyamide 25, 40 and 50 mm Elastic 40, 50 and 100 mm Velcro 50 mm
Fill:	Foam 3mm
Buckles:	Duraflex

VARIANTS

Assault	For 5 rifle magazines
Patrol	For 4 rifle and 2 pistol magazines
Regular	As above, depends on the type
Large	Extended by 2 rifle mag pouches
